

FP&A Analyst - Case Study

Author: Xin Huang

Create Date: 2025-06-05

Version: 0.1

Content: Initial version with data cleansing and transformation

Background & Tasks

Company Overview

You work for NextGen Learning, a leading provider of Apprenticeship training. The company is focused on growth, operational efficiency, and profitability.

Scenario

- The CFO has asked you to prepare a two-page presentation analysing the company's financial performance in 2024 vs 2023. This analysis will be discussed with the Board and shared with investors, so clarity and insight are critical.

Your Task

Using the provided monthly P&L, prepare a structured analysis that includes:

1. Profit & Loss Summary

- A clear summary of 2023 vs 2024 financial performance.
- Commentary of key drivers affecting performance.

2. Bridge Analysis

- A visual representation (e.g., waterfall chart) showing the key movements from 2023 to 2024.
- Breakdown of major factors driving changes in revenue, costs, and EBITDA.

3. Additional Information & Queries

- Identify trends, challenges, and opportunities.
- Highlight any missing information that would improve your analysis.
- Identify areas requiring further investigation or potential risks.

Format & Submission

- Presentation format (PowerPoint)
 - Maximum two pages/slides (excluding cover/title page)
 - Deadline: 2pm, Monday 9th
-

Data Cleansing

1. Null value, added formula into excel to complete all level's data
 - "Total Revenue", "ESFA Funding", "Total Cost of Sales", "Direct Staff Costs", etc...
2. Added Items number as dimensional data for data modeling and level indicator, eg:

Level	Item Number	Item Name
Level 1	EBI000000	EBITDA
Level 2	EBI100000	Gross Profit
Level 3	EBI110000	Revenue
Level 4	EBI111000	ESFA Funding
Level 5	EBI111100	ESFA Apprenticeship Funding
Level 6	EBI111101	Apprenticeship Levy monthly revenue

- 3. Removed rows without Item Number, eg:
 - "Total Total Revenue", "Total Gross Profit", "Total Cost of Sales", etc...

4. **Data Cleansing** snapshot

Table.TransformColumnTypes(#"Renamed Columns",{{"dateid", type date}, {"Value", type number}})

Item Number	Item Name	dateid	Value
1	EBITDA	1/31/2023	836798.7365
2	EBITDA	2/28/2023	155700.9812
3	EBITDA	3/31/2023	-84167.4051
4	EBITDA	4/30/2023	808298.4274
5	EBITDA	5/31/2023	1307313.256
6	EBITDA	6/30/2023	3354668.495
7	EBITDA	7/31/2023	3259139.519
8	EBITDA	8/31/2023	1882560.087
9	EBITDA	9/30/2023	821313.4779
10	EBITDA	10/31/2023	992334.9509
11	EBITDA	11/30/2023	3045887.52
12	EBITDA	12/31/2023	2875995.731
13	EBITDA	1/31/2024	160620.0638
14	EBITDA	2/28/2024	-66822.28045
15	EBITDA	3/31/2024	480825.3135
16	EBITDA	4/30/2024	863867.5653
17	EBITDA	5/31/2024	612816.6784
18	EBITDA	6/30/2024	1648154.372
19	EBITDA	7/31/2024	4191900.454
20	EBITDA	8/31/2024	2202376.037
21	EBITDA	9/30/2024	2209125.225
22	EBITDA	10/31/2024	3048250.13
23	EBITDA	11/30/2024	3666221.666
24	EBITDA	12/31/2024	3654544.354
25	Gross Profit	1/31/2023	7628059.284
26	Gross Profit	2/28/2023	7005600.85
27	Gross Profit	3/31/2023	6533296.442

COLUMNS: 999+ ROWS: 1000

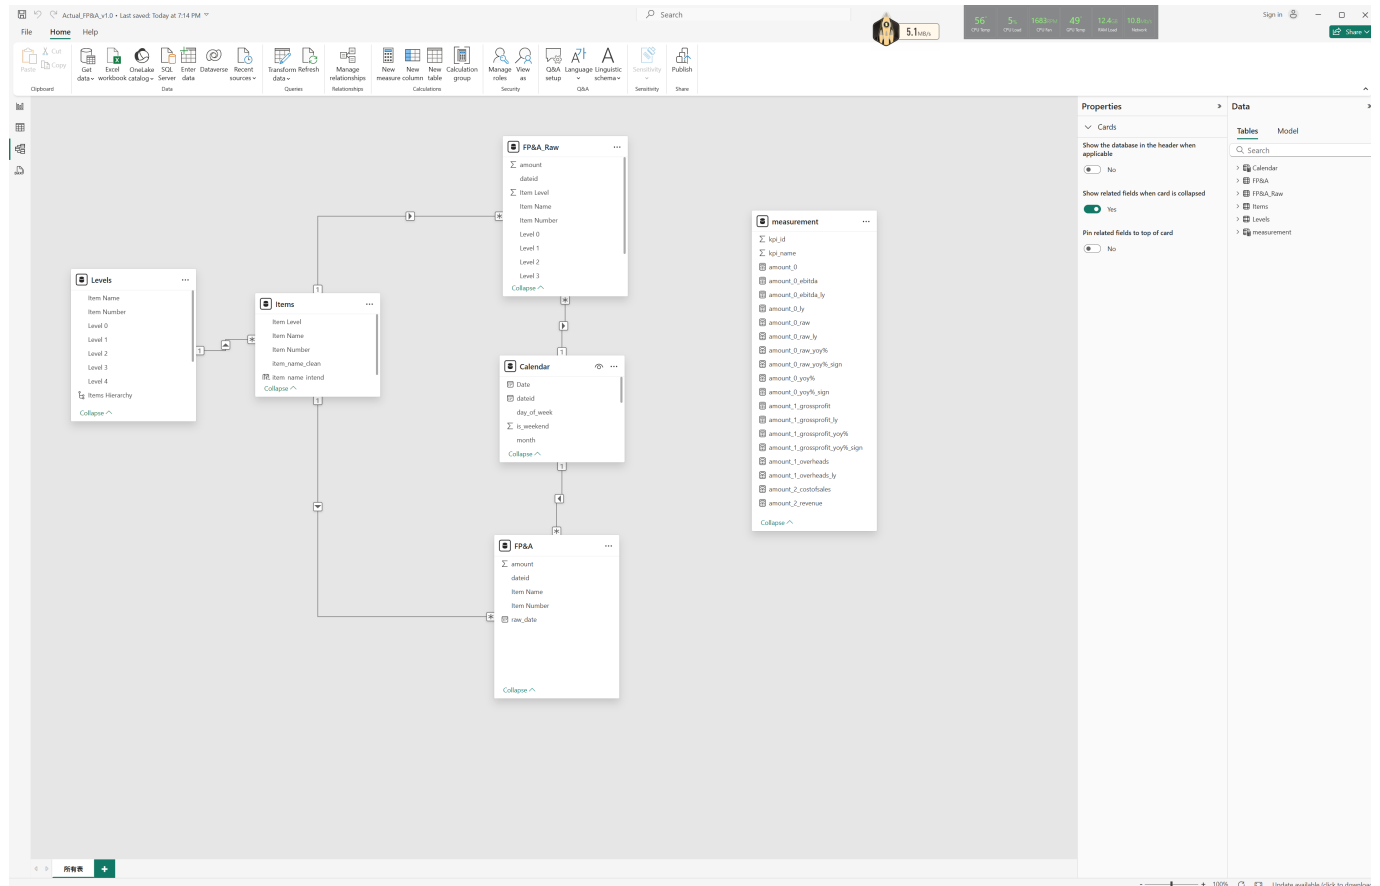

Column profiling based on top 1000 rows

Refer to pbix file for other detailed transformation steps, eg, remove rows/columns, Unpivot columns, replace Null/error, etc...

Data Modeling

1. Added Items as dimension with indented item name;
2. Added Calendar as date dimension;
3. Added Measurement table to category different DAX measures;

4. **Data Modeling** snapshot

DAX Design & Implementation

1. Total Amount

```
amount_0_ebitda =
var a = CALCULATE(SUM('FP&A'[amount]), FILTER(ALL('Levels'), 'Levels'[Level 0] = "EBITDA"))
return IF(ISBLANK(a), 0, a)
```

2. Total Gross Profit

```
amount_1_grossprofit =
var a = CALCULATE(SUM('FP&A'[amount]), FILTER(ALL('Levels'), 'Levels'[Level 1] = "Gross Profit"))
return IF(ISBLANK(a), 0, a)
```

3. Total Overheads

```
amount_1_overheads =  
var a = CALCULATE(SUM('FP&A'[amount]), FILTER(ALL('Levels'), 'Levels'[Level 1] =  
"Overheads"))  
return IF(ISBLANK(a), 0, a)
```

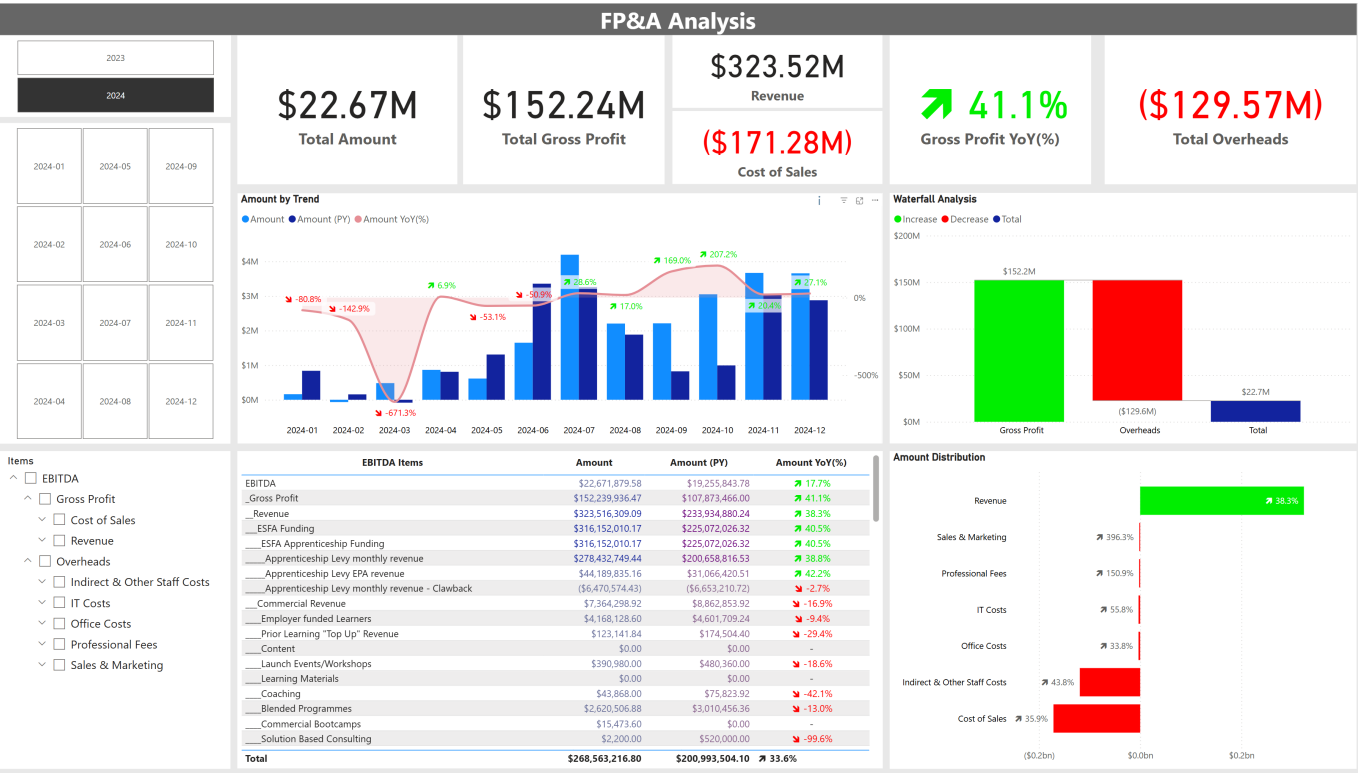

4. Total Revenue

```
amount_2_revenue =  
var a = CALCULATE(SUM('FP&A'[amount]), FILTER(ALL('Levels'), 'Levels'[Level 2] =  
"Revenue"))  
return IF(ISBLANK(a), 0, a) // Revenue, Gross Profit
```

5. Total Cost of Sales

```
amount_2_costofsales =  
var a = CALCULATE(SUM('FP&A'[amount]), FILTER(ALL('Levels'), 'Levels'[Level 2] =  
"Cost of Sales"))  
return IF(ISBLANK(a), 0, a) // Revenue, Gross Profit
```
