**Enquiries about the vacancy, shortlisting and interviews:**

Name: Andrew Peet

Email: [andrew.peet@manchester.ac.uk](mailto:andrew.peet@manchester.ac.uk)

---

**Introduction**

The University of Manchester is seeking to develop its capacity and capability to undertake detailed analysis across a range of data sets, to enable the generation of the insight that can inform decision making and action planning. The post holder will become a member of the University's analytical community and will have a key role in helping us transform our ways of working and outputs. The role sits within the Planning Directorate which supports the University's strategic planning processes, provides key management information and insight to senior decision makers and manages the submission of statutory student returns to the regulator.

**Overall Purpose of the Job**

This post will undertake analysis on a range of internal and external benchmarking datasets to generate insight that supports decision-making, aligned to the University goals. The post will support the Lead Data Analyst in improving the visualisation, reporting and dissemination of key insights for different audiences, alongside the promotion of a self-service automation model for routine requests.

### **Key Responsibilities, Accountabilities or Duties**

- Independently produce and regularly update data dashboards to ensure accurate, timely, and easily understandable information to support strategic decision-making across the institution
- Attain expertise in key data sets e.g. HESA student, staff and finance data, NSS, Graduate Outcomes, OfS Outcomes and Experience metrics, differential Student Attainment and the mechanics of League Tables, and to act as a key contact for colleagues across the university
- Continuously review and improve data presentation and availability to ensure the outputs of dashboards are aligned with strategic priorities and to enable extraction of maximum value from key data sources
- Collaborate closely with the Data Architect and Data Modeller to understand the design and functionality of dimensional data models and to ensure data flows are current and data models remain fit for purpose
- To produce summary reports and key analysis relevant to University Executive and Committees across the University both at institution level and within the context of the wider sector
- To undertake bespoke analyses in response to queries from the University Executive and senior managers, or to follow up questions from own analyses
- Act a central point of contact for stakeholders and analysts across the institution to ensure that data analysis undertaken across the institution is consistent and co-ordinated
- Proactively engage with colleagues, staff networks and committees to build constructive relationships
- Capture requirements from colleagues, and understand what questions need to be answered from the data
- Implement procedures to keep data accurate and up to date, and to work proactively to remedy data quality issues
- Maintain confidentiality of information in line with data protection requirements and University policy and to operate in line with GDPR and best practice guidance in data security and quality
- To undertake such other duties as may be required by the Lead Data Analyst or Head of Business Intelligence commensurate with the level of responsibility of the role

### **Essential Knowledge, Skills and Experience**

- A high level of computer literacy, particularly with data visualisation packages (e.g. Power Bi), Power Query, and advanced Excel skill
- Experience of working with and analysing large datasets
- Experience of using visualisation software such as Power Bi to summarise detailed findings in an accessible and visually-appealing way which draws out the key messages for a wide range of audiences
- Attention to detail, particularly in ensuring quality and robustness of data analysis
- The ability to work on own initiative
- Strong organisational and time management skills, including the ability to manage own workload and work to deadlines
- Well-developed numerical and written communication skills, particularly the ability to summarise concisely key trends or information to individuals at all levels from a range of different groups/backgrounds
- Experience of and commitment to working collaboratively and flexibly as part of a team, and to developing strong working relationships across a large organisation

- Knowledge of the Higher Education sector and an understanding of the major issues facing it both now and in the future
- Experience of working with confidential or sensitive data, and an understanding of data protection principles and GDPR

### **Desirable Knowledge Skills and Experience**

- Degree or equivalent relevant qualification, incorporating data analysis
- Knowledge of statistics and statistical packages e.g. SPSS
- Knowledge of qualitative data analysis techniques including analysis of narrative feedback.
- Experience of programming languages such as Python and R
